

#6 MOUNT PLEASANT

 Saint Philip, Barbados

This home's elegance, extensive building design and the use of blended external finishes compliment its elevated stance.

The automated double car garage door grants secondary access into the home. Beyond the garage are spacious ventilated storage areas where security cameras have been strategically mounted there. A cozy den separates the garage and is equipped with a well-lit bar, sink and wine cellar and wine cooler.

The primary access to the home is through the arch which opens to the foyer where a powder room, large laundry, utilities room and Gym/ study are all located.

This traditional multi story home with its inverted floor plan, accommodates the kitchen, living, dining and Tv room on its first floor. On the landing the kitchen can be found to the left and has access to the rear of the property. This very practical kitchen is equipped with modern appliances and allows free flowing movement. The flow from each room offers convenience especially if entertaining and the patio which has fantastic views stretches the full length of the property.

Two bedrooms are positioned on both sides of the corridor and share a bathroom, while the primary bedroom has walk through closets, full bathroom with tub and shower, air conditioning and more closet space.

Utilization of external space has been well orchestrated. There are water tanks (Potable and Irrigation), pump, generators and water filters.
